

Google Ads API Tool

Design Documentation

Company:	Sourcy Global Pte Ltd
Website:	https://sourcy.ai
Contact:	eugeneclarance@sourcyglobal.com
Date:	April 2026
Version:	1.0
Document Type:	API Basic Access Application - Design Document

1. Company Overview

Sourcy Global is a B2B sourcing platform (sourcy.ai) that connects buyers with verified suppliers across Southeast Asia and Latin America. We use Google Ads to drive qualified traffic to our platform and generate business leads across our target markets: Indonesia, Philippines, Thailand, Brazil, United States, and Mexico.

We only advertise for our own website (sourcy.ai) and do not manage ads for any third-party clients. All advertising is managed by our internal marketing team.

2. Tool Purpose & Scope

We are building an internal marketing analytics tool that connects to the Google Ads API to automate campaign performance reporting. The tool serves two primary functions:

- 1. Performance Reporting Dashboard** - An interactive HTML dashboard that displays campaign metrics including impressions, clicks, CTR, CPC, conversions, ROAS, and cost breakdowns by geography and audience segment.
- 2. Automated Weekly Reports** - Generate HTML reports with charts and tables summarizing weekly campaign performance, geographic distribution, and actionable optimization recommendations.

Important: The tool is **read-only**. It only pulls performance metrics from the API for reporting purposes. It does not create, modify, pause, or delete any campaigns, ad groups, ads, or other Google Ads entities.

3. Tool Access

The tool is strictly for **internal use only**. Only employees and authorized team members of Sourcy Global will have access to the tool. No external users, clients, or third parties will have direct access.

Role	Access Level	Description
Marketing Team	Full Dashboard	View all reports and generate new ones
Management	Report Viewer	View generated reports and KPI summaries
Engineering	Admin	Tool maintenance and API credential management

4. Technical Architecture

4.1 System Components

Component	Technology	Purpose
Agent Framework	OpenAI Agents SDK (Python)	Orchestrates data collection and analysis
Google Ads Integration	google-ads Python client	Pulls campaign performance data via API
Google Analytics Integration	google-analytics-data	Pulls website traffic and conversion data
Search Console Integration	google-api-python-client	Pulls organic search performance data

Report Generator	Jinja2 + Chart.js	Generates interactive HTML reports with charts
Authentication	OAuth 2.0	Secure API access with refresh tokens

4.2 Data Flow

The system follows a simple read-only data flow:

1. User requests a report via the chat interface
2. The Data Analyst agent determines which API calls are needed
3. API tools fetch data from Google Ads, GA4, and Search Console
4. The agent analyzes the data and identifies insights
5. The report generator creates an HTML report with charts
6. The report is saved locally and presented to the user

5. Google Ads API Services Used

The tool uses the Google Ads API in **read-only mode**. The following services and resources are accessed:

API Service / Resource	Method	Purpose
GoogleAdsService	SearchStream	Query campaign, ad group, and keyword metrics
Campaign resource	Read	Get campaign names, status, channel type
AdGroup resource	Read	Get ad group performance breakdown
KeywordView resource	Read	Get keyword-level performance metrics
SearchTermView resource	Read	View actual search queries triggering ads
GeographicView resource	Read	Get country/region performance data
AdGroupAudienceView	Read	Get audience segment performance

No mutate/write operations are performed. The tool does not create, update, pause, or delete any campaigns, ads, keywords, or other Google Ads entities.

6. Tool Mockup - Report Dashboard

Below is a mockup of the HTML report generated by the tool. The report includes KPI summary cards, campaign performance tables, geographic breakdown charts, and actionable insights.

6.1 KPI Summary Cards

Total Spend	Conversions	ROAS	Avg. CTR	Sessions (GA4)
\$5,230.45	142	3.8x	4.2%	2,971
+12% vs last week	+23% vs last week	+0.5x vs last week	-0.3% vs last week	+8% vs last week

6.2 Campaign Performance Table

Campaign	Impressions	Clicks	CTR	Cost	Conv.	ROAS
Brand - SEA Markets	45,230	3,120	6.9%	\$1,890	67	4.2x
Product - Indonesia	23,450	1,456	6.2%	\$1,230	38	3.9x
Brand - LatAm	18,900	890	4.7%	\$980	22	3.1x
Remarketing - Global	12,340	567	4.6%	\$650	15	2.8x

6.3 Geographic Performance (Blindspot Detection)

Country	Status	Impressions	Clicks	Cost	Conv.	Flag
Indonesia	TARGET	18,450	1,230	\$890	32	OK
Philippines	TARGET	12,300	780	\$620	18	OK
United States	TARGET	8,900	456	\$780	12	OK
Thailand	TARGET	6,700	345	\$410	8	LOW CTR
Nigeria	NON-TARGET	3,200	89	\$120	0	WASTED SPEND
India	NON-TARGET	2,800	67	\$95	0	WASTED SPEND

6.4 Insights & Recommendations

WASTED SPEND ALERT: 4.5% of total budget (\$215) is going to non-target countries (Nigeria, India). Recommend adding neg.

LOW CTR: Thailand campaigns show 3.1% CTR vs 6.5% average for other target markets. Investigate ad copy relevance and l

OPPORTUNITY: 12 high-volume organic keywords from Search Console have no paid coverage. Consider creating campaigns

7. Security & Compliance

- OAuth 2.0 credentials stored securely in environment variables
- Refresh tokens stored in .env file, excluded from version control via .gitignore
- Service account JSON key stored in credentials/ directory, excluded from version control
- All API access is read-only - no write/mutate operations
- Tool runs locally on company machines - no cloud hosting or external access
- Only authorized internal team members can access the tool

8. Summary

This tool is a simple, internal-only, read-only marketing analytics tool built for Sourcy Global's marketing team. It pulls campaign performance metrics from the Google Ads API to generate visual reports that help our team optimize ad spend across our target markets. No campaign modifications are made through the API.
